

# BLUE BALANCE

protect your eyes from harmful blue light

## Did you know?

Even though blue light is necessary, too much may lead to harm and pose a number of risks. Blue light can:

- 💡 Disrupt your biorhythm
- 💡 Lead to sleeping disorders
- 💡 Promote the development of eye conditions
- 💡 Cause eye strain and redness

**To address these issues, experts at BOD had developed a modern coating for eyeglass lenses, called Blue Balance.**

Cutting-edge technologies produce a double-sided coating effect, which helps protect the eyes from harmful light emitted by digital devices, resulting in less eye strain and a reliable sense of comfort.

The new

# BLUE BALANCE - coating for eyeglass lenses:

Protects against harmful blue-spectrum light emitted by digital devices.

Eliminates reflections from the inside and outside of the lens.

Reduces eye strain.

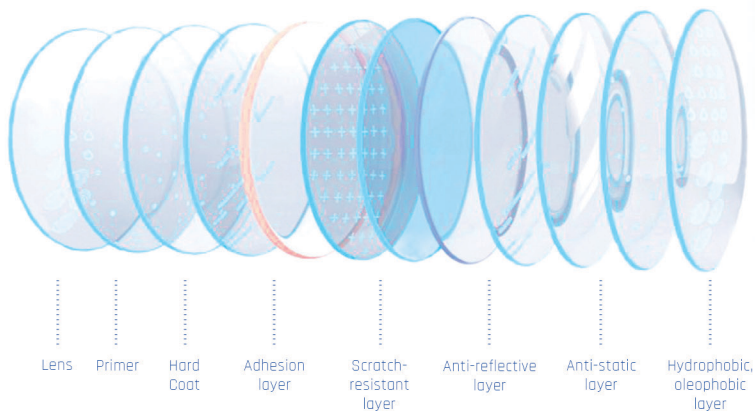

Is 12 times more scratch-resistant.

Is easy to maintain.

Protects eyeglass lenses from dust and dew.

**BLUE BALANCE** - multi-layered coating characterized by anti-reflective, anti-static, hydrophobic and oleophobic properties.

\*Warranty for 2 years.

**BLUE BALANCE**
